COVID-19 RAPID ANTIGEN

COVID-19 Rapid Antigen POSITIVE

Principle:

The test performed using membrane-based lateral flow immunoassay technique on Abbott Panbio™ COVID-19 Ag Rapid Test Device.

Remarks:

- This rapid test is for the qualitative detection of SARS-CoV-2 antigen (Ag) in human nasal swab specimens.
- It is intended to be used as an aid in the diagnosis of COVID-19 infection and cannot be used as confirmatory test.
- Negative results don't preclude SARSCoV-2 infection.
- Negative results must be combined with clinical observations, patient history, and epidemiological information.
- Positive results must be followed by confirmatory RT-PCR.
